Reference Documentation:

The software commands, inputs and the installation can be consulted in the section two, which is the installation. Also, the implementation shows the format and the queries used in this experiment.

Benchmark framework:

The benchmark framework can be seen in the tables and plots along the paper, in sections five and six, which are results and simulation respectively. In the github repository are the python files, which can be executed, and plots are created. Also, can be consulted the parameters collected during the work. There are comments along the python scripts to clear the information involved.

Data sources:

The direction of the data source is: https://www.kaggle.com/code/amykagg/starter-e-commerce-data-1dc04828-4/data

Different sizes of these CSV file have been created; these files are in the git repository.
